# Global analysis of RNA structures and their dynamics in the adaptative response of *Staphylococcus aureus*.

**AZEDE Alan**

PARIS-SACLAY UNIVERSITY ED SDSV – PH.D Bacteriology/Bioinformatic  
39<sup>th</sup> TBI Winterseminar  
I2BC-SRRB / UMR9198

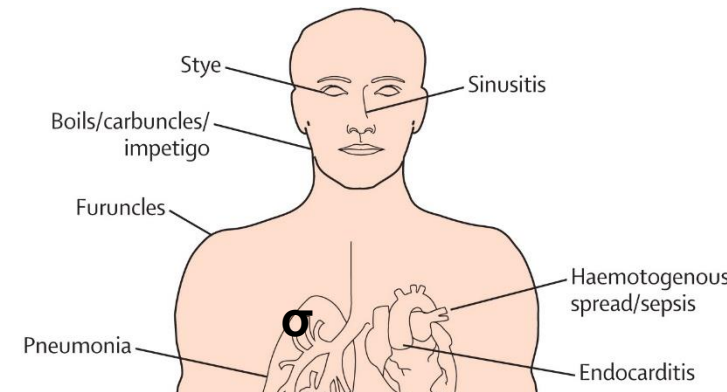

Supervisor : Philippe BOULOC

Co-tutors : Yann PONTY and Sebastian WILL(CNRS/LIX), Bruno SARGUEIL (Pharma Paris)

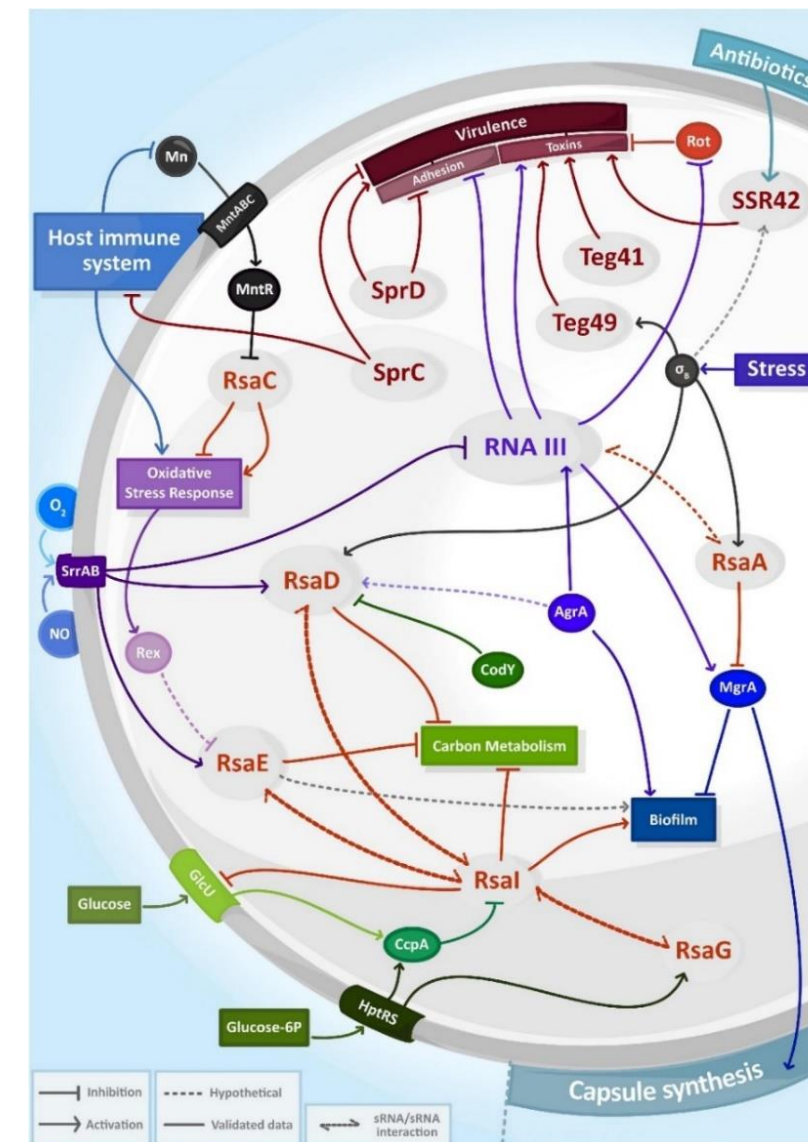

# Introduction to the 80prime CNRS project

- **Major** Gram positive coagulase + **pathogen**
- Hospital/Community-acquired infections associated with **antibiotic resistant strains** (ESKAPE)
- Bone and/or joint infection, toxin-related infection, whitlow, furunculosis, ...
- Numerous **virulence factors**, **adaption** to various environmental conditions, **persistence** within the host, **biofilm** formation...

## Transcriptional factors

But also **RNA...**

# My interdisciplinary Ph.D project

- Decipher **RNA structures dynamic in adaption and global physiology**
  - **Classify RNA structures/motifs** into families based on position/similarities + structure function analysis
  - Find or validate **novel RNA regulatory motifs**
  - Look at the RBS/TE + translational coupling between ORFs
  - Study the **effect of temperature** on structures linked to pathogenicity
  - Contribution of **RNA chaperones** on these structures
  - Effect of **sRNA's induction** on mRNA targets ?
  - Explore **new potentiel targets for drug design**
- Mapping a « **druggable transcriptome** » in *S. aureus* ?
- Design/improve small molecules/analogues for riboswitches

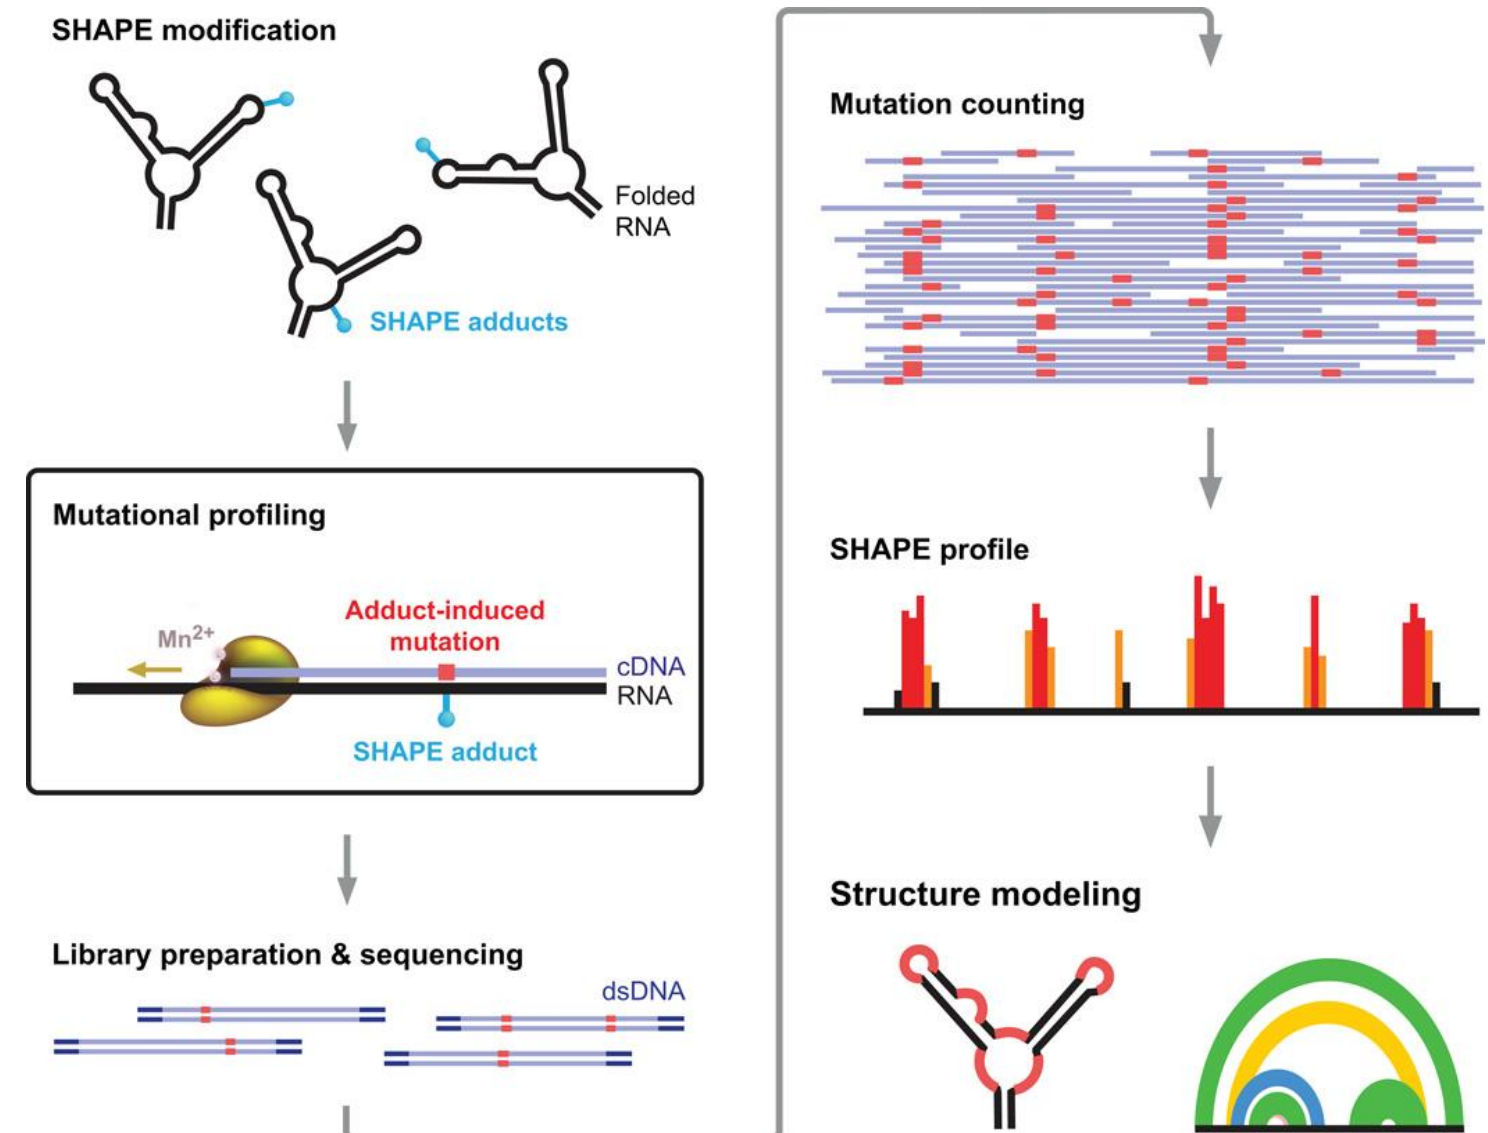

# Deciphering RNA structures with the SHAPE chemistry

**SHAPE** = **Selective 2'-hydroxyl acylation** analyzed by primer extension;

Acylation of 2'OH for a **structurally "flexible" nucleotide**;

Solving **secondary RNAs structures** *in vitro, ex vivo and in vivo*

# Limitations and unknown

- Gram positive = thick **PG**
- Cellular **environment**
- Conditions, probes, ... → **reproducibility + robustness**
- Modelling/predict methodologies to **detect precise conformational changes**
- **Various species** of RNA *in cellulo*
- Reactivity profiles at the transcriptomic level = **huge volumes of data**
- RNA interactome and folding dynamics

**How can we believe that our probing by SHAPE reagents will work *in vivo* ?**

# Ideas and benchmark experiments

- Use an « inert » RNA as a template for SHAPE-CE
- **Known structure** or at least predicted
- **Stable** and fold independantly
- Perform a **SHAPE-CE experiment *in vivo***

*Didymium iridis*

## Selective 2'-Hydroxyl Acylation

## analyzed by Primer Extension

## Resolution by single capillary electrophoresis

## Raw capillary electrophoresis electropherogram

## SHAPE reactivities (integrated peak areas)

### Direct applications:

- confirm/refine structures
- monitor RNA folding
- observe ligand binding

### Constrain RNAstructure folding:

- propose new structures
- detect alternative conformations

Ribozyme

Riboswitch

# Ideas and benchmark experiments

- Use an « inert » RNA as a template for SHAPE-CE
- **Known structure** or at least predicted
- **Stable** and fold independantly
- Perform a **SHAPE-CE experiment *in vivo***

## Selective 2'-Hydroxyl Acylation

# Conclusion – Issues - Perspectives

- Cloning the intron in pJET1.2 and pRMC2 → **Done**
- Transformation in *E. coli* IMO8B → **Done**
- Transformation in *S. aureus* RN4220 and HG003 strains → **Done and checked but...**
- Test few probes *in vivo/in vitro* (5NIA, 2A3...) → **on going**
- SHAPE-CE *in vivo* → **Done** and **on going**
- **RNA III *in vivo* ???**

# My research and academic related experience

## BTS-BioAc

- **LncRNA** in *P. tricornatum* and phosphate stress response.

## Bachelor BR

- Unveiling new genes in ADH using NGS/WGS.

## MSc Microbiology

- Role of **MazF** during growth restart in *E. coli*.

## Post-Doc(s) ?

Assistant Professor

- Characterization of the **transcriptome/proteome** of the host during *S. flexneri* infections.

## MSc M&CB

- Deciphering the putative role of the **6S RNA** in biofilm and sporulation pathways in *C. difficile*.

## Ph.D Student

- **RNA structurome** in *S. aureus* during adaptation according to several stresses and conditions.

# Dual properties of RNA chemistry

- 2 types of information :

**sequence and structure**

- 4 conformational structures;

- One given sequence → **several structures**;

- Structure ⇔ function;

**How can we determine these structures ?**

# RNA-mediated regulation in bacteria

- Plethora of basic cellular processes;
- Regulation of gene expression and translation efficiency;
- Regulation of effector proteins;
- Sensing;
- Response to stimuli;
- Protection against MGE

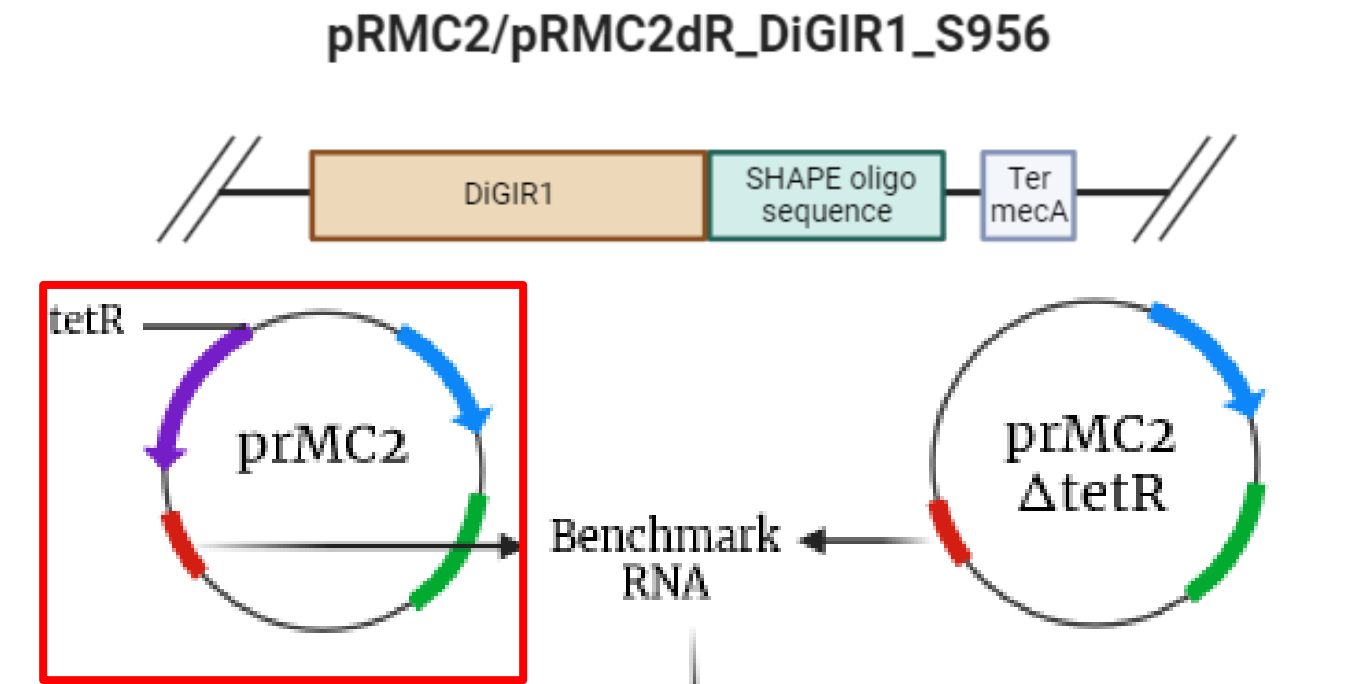

**Yet, a lot of these regulatory pathways need to be uncover !**

# 2A3 probing *in vivo* experiment (adapted)

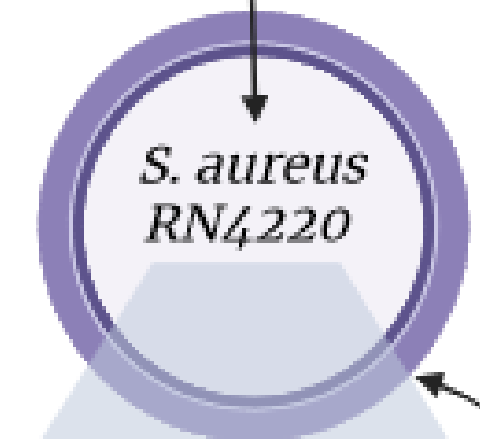

## Times of Induction

HG003 or RN4220 pRMC2 DiGIR1 day- culture

- 2mL aliquots at OD~1-2
- Wash in PBS 7.4
- RNA probing with 2A3 (20min, 37°C) or DMSO (ctrl)

SHAPE reagents (+Mg<sup>2+</sup> +DMSO)

- Quenching with DTT 1M
- Lysis and heat phenol-chloroform RNA extraction
- Samples conserved at -20°C or -70°C

# Accessing the RNA structure

- **Biophysic methods :**

- Crystallography

- SAXS;

- NMR;

- LC-MS;

- Cryo-EM;

- FRET...

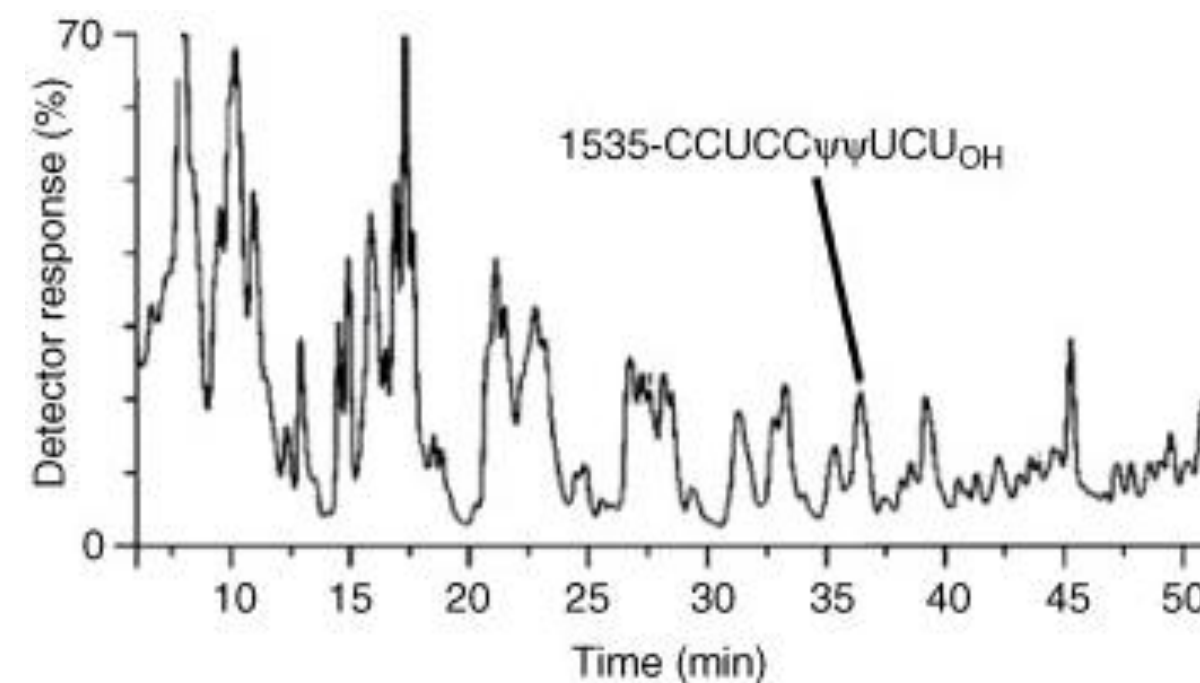

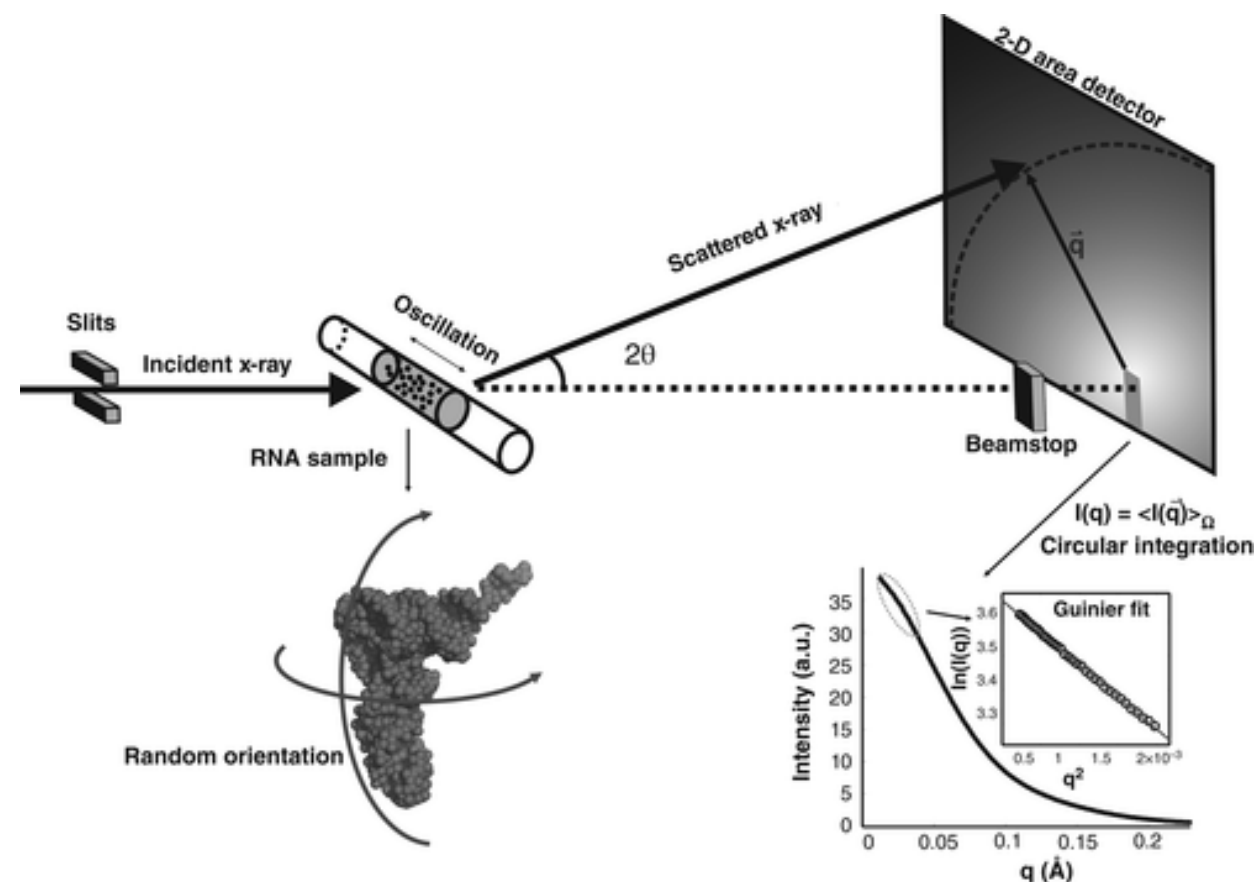

- **Structure-specific chemicals+ enzymes :**

- Nucleases;

- Rnases-mimics;

- Base-specific probes;

- **Ribose-specific probes...**

# Testing temperature with thermoresponsive sequences ?

- Use a **staphylococcal RNA**;
- **csp genes** : RNA chaperones;
- **Structure predicted** with mFold
- Thermoresponsive éléments in **the 5'UTR** of csp genes

Ph.D

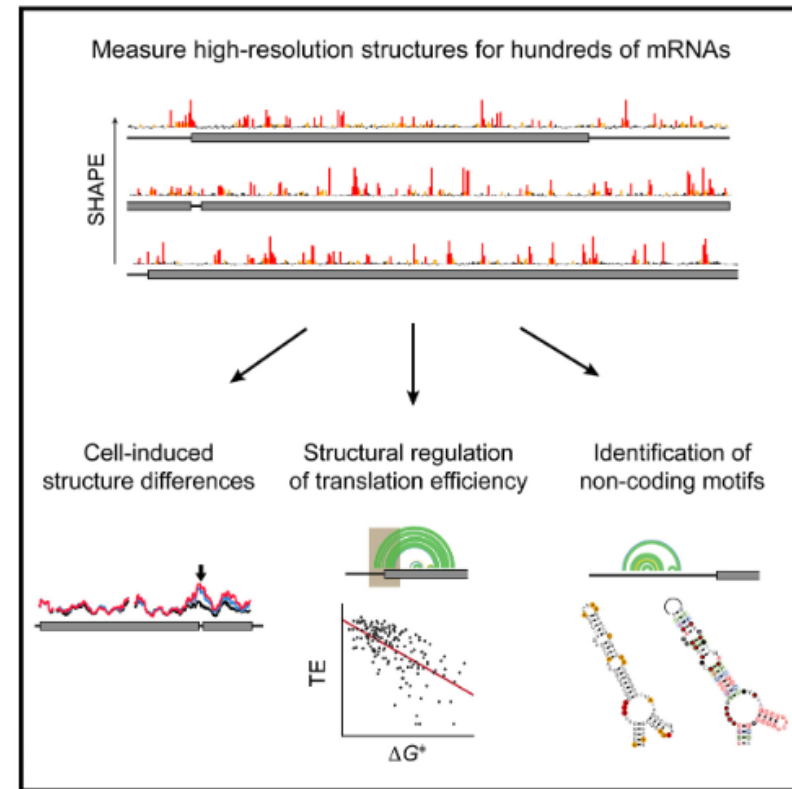

Alejandro Toledo-Arana

# Relationship between TE and mRNA's structure/regulation in *E. coli*

## Cell

### Pervasive Regulatory Functions of mRNA Structure Revealed by High-Resolution SHAPE Probing

#### Graphical Abstract

#### Authors

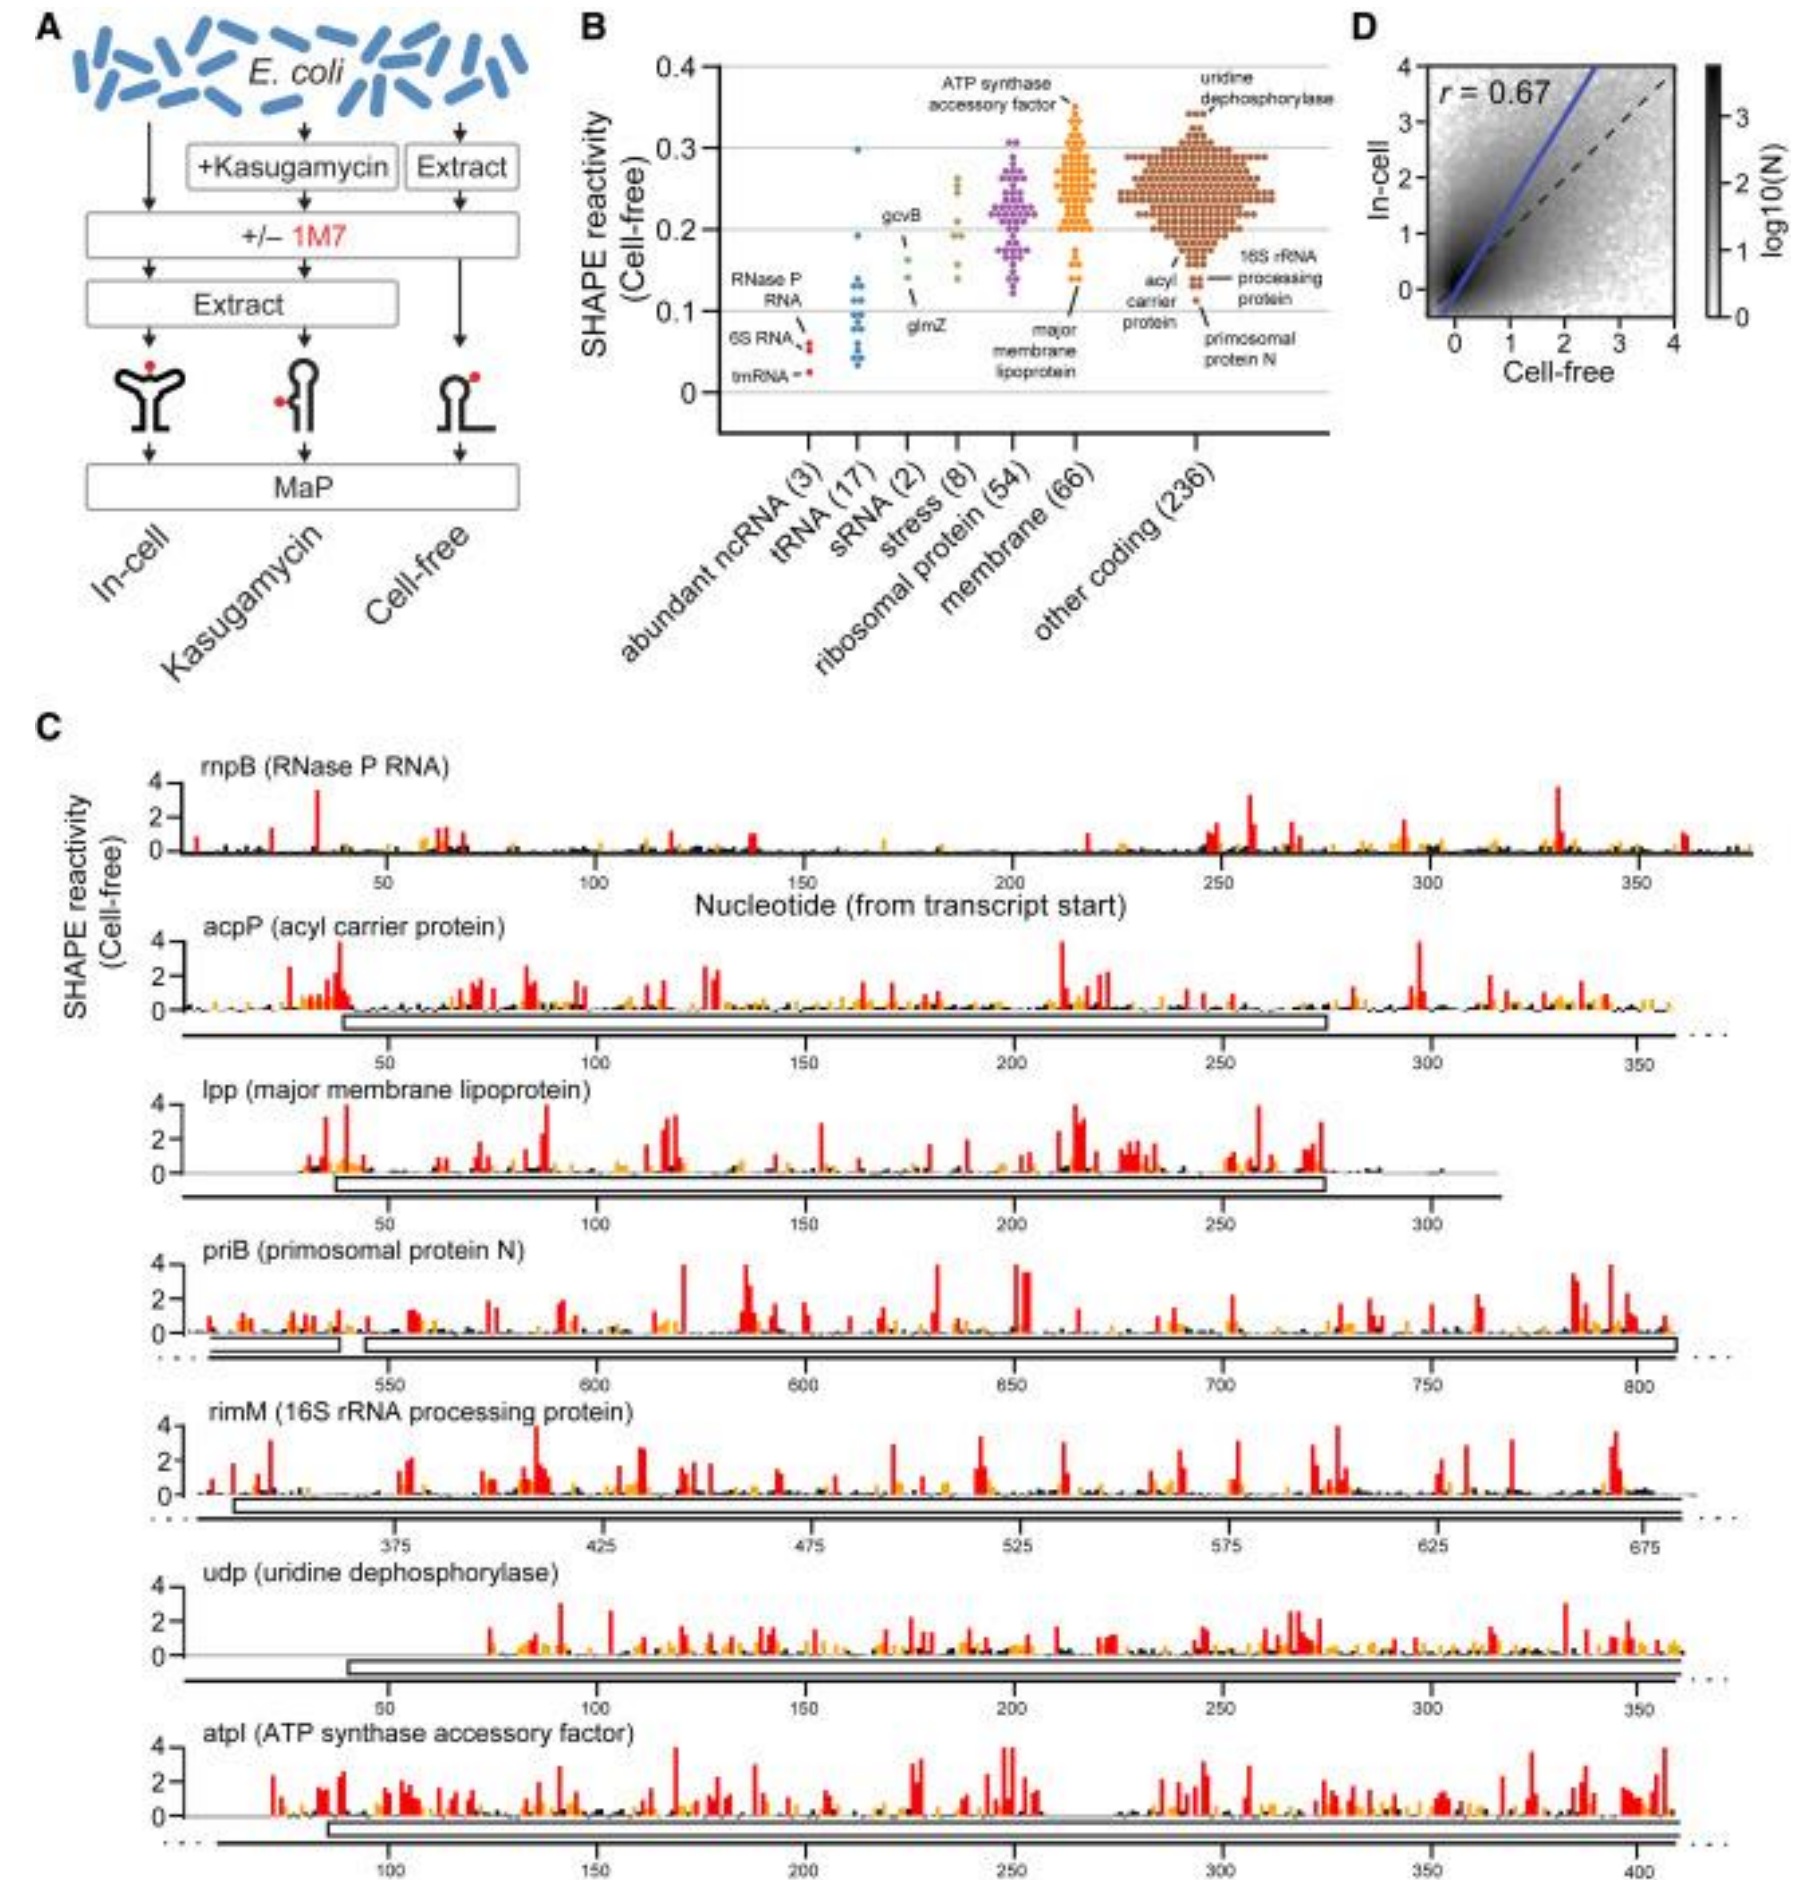

Anthony M. Mustoe, Steven Busan, Gregory M. Rice, ..., Razvan Nutiu, Jeremy L. Baryza, Kevin M. Weeks

#### Correspondence

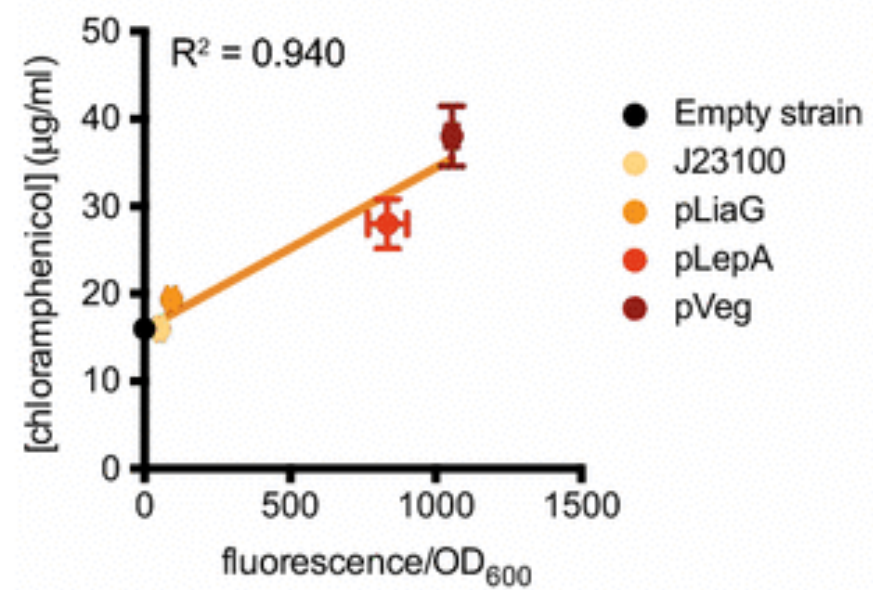

amustoe@unc.edu (A.M.M.), weeks@unc.edu (K.M.W.)

#### In Brief

High-resolution probing of hundreds of genes in living *E. coli* cells reveals that bacterial mRNAs fold into highly diverse and complex structures and that these structures have widespread regulatory functions.
