Shape space topology induced by the sequence-structure map

Discussion

- ▶ study topology of RNA sequence to structure mapping by exhaustive folding and enumeration of sequence spaces
- ▶ extended neutral networks allow a population of RNA molecules to explore sequence space by neutral drift
- ▶ asymmetric accessibility relations support evolutionary innovation

Discussion

- ▶ study topology of RNA sequence to structure mapping by exhaustive folding and enumeration of sequence spaces
- ▶ extended neutral networks allow a population of RNA molecules to explore sequence space by neutral drift
- ▶ asymmetric accessibility relations support evolutionary innovation

Discussion

- ▶ study topology of RNA sequence to structure mapping by exhaustive folding and enumeration of sequence spaces
- ▶ extended neutral networks allow a population of RNA molecules to explore sequence space by neutral drift
- ▶ asymmetric accessibility relations support evolutionary innovation

Outlook

- ▶ functional RNAs work by interacting with other RNAs
- ▶ Camille Stephan-Otto Attolini et al. studied the cofolding map of interacting RNA sequences:
 - ▶ the cofolding map admits large neutral networks and long neutral paths similar to the folding map of single RNA molecules
- ▶ tool to compute RNA-RNA interaction by co-folding two RNA molecules

Outlook

- ▶ functional RNAs work by interacting with other RNAs

RNA Secondary Structure

- ▶ Hairpin Loops
- ▶ Interior Loops
- ▶ Multiloops
- ▶ Exterior Loop

Loop decomposition of RNA Secondary Structure

► $F(S) = \sum_{L \in S} F_L.$

Basic Algorithms

- ▶ McCaskill: Dynamic programming algorithm for calculation of the full equilibrium partition function Z for RNA secondary structure in $O(N^3)$
- ▶ Vienna RNA Package

Basic Algorithms

Complete ensemble of secondary structures

Probability of an unstructured region

Complete ensemble of secondary structures

Probability of an unstructured region

Probability of interaction in unstructured regions

Information provided by our algorithm

- ▶ structural context of a binding site
 - ▶ $P_u[i, j]$ region $[i, j]$ contains no secondary structure
- ▶ location of possible binding sites
 - ▶ $P^*[i, j]$ probability of a regional interaction
- ▶ energetics of RNA-RNA interaction
 - ▶ $\Delta G = \Delta G_u + \Delta G_h$

Information provided by our algorithm

- ▶ energetics of RNA-RNA interaction
 - ▶ $\Delta G = \Delta G_u + \Delta G_h$

$P_u[i, j]$ region $[i, j]$ contains no secondary structure

$$P_u[i, j] = \underbrace{\frac{Z[1, i-1] \times 1 \times Z[j+1, N]}{Z[1, N]}}_{\text{exterior}} + \underbrace{\sum_{p < i \leq j < q} P_{pq} \frac{Z_{pq}[i, j]}{Z^b[p, q]}}_{\text{enclosed}}.$$

Z' Interaction of region $[i, j]$ with region $[i^*, j^*]$

$$Z'[i, j, i^*, j^*] = \sum_{\substack{i < k < j \\ i^* > k^* > j^*}} Z'[i, k, i^*, k^*] e^{-\frac{1}{kT} l(k, k^*, j, j^*)}.$$

probability and optimal free energy of an interaction

- ▶ conditional probability given that two molecules bind at all

$$P^*[i, j] = \frac{Z^*[i, j]}{\sum_{k < l} Z^*[k, l]}. \quad Z^*[i, j] = P_u[i, j] \sum_{i^* > j^*} Z^l[i, j, i^*, j^*].$$

- ▶ optimal free energy of a regional interaction

$$\Delta G_i = \min_{k \leq i \leq l} \{ \Delta G[k, l] \}. \quad \Delta G[i, j] = (-kT) \ln Z^*[i, j].$$

probability and optimal free energy of an interaction

- ▶ conditional probability given that two molecules bind at all

$$P^*[i, j] = \frac{Z^*[i, j]}{\sum_{k < l} Z^*[k, l]}. \quad Z^*[i, j] = P_u[i, j] \sum_{i^* > j^*} Z^l[i, j, i^*, j^*].$$

- ▶ optimal free energy of a regional interaction

$$\Delta G_i = \min_{k \leq i \leq l} \{ \Delta G[k, l] \}. \quad \Delta G[i, j] = (-kT) \ln Z^*[i, j].$$

Discussion

- ▶ Realistic description of interaction between small RNAs and their targets
- ▶ Structural context of a possible binding site
- ▶ Location of possible binding sites
- ▶ Energetics of RNA-RNA interaction
- ▶ Time complexity is $O(N^3)$, memory requirement $O(N^2)$
