

From self-organization to evolution of RNA molecules

The origin of biological information

Peter Schuster

Institut für Theoretische Chemie und Molekulare
Strukturbiologie der Universität Wien

Self-formation. Theory and application

Vilnius, 26.– 28.11.2003

Web-Page for further information:

<http://www.tbi.univie.ac.at/~pks>

- 1. Autocatalytic chemical reactions in the flow reactor**
- 2. Replication, mutation, selection and Shannon information**
- 3. Evolution *in silico* and optimization of RNA structures**
- 4. Random walks and ,ensemble learning‘**
- 5. Sequence-structure maps, neutral networks, and intersections**

- 1. Autocatalytic chemical reactions in the flow reactor**

2. Replication, mutation, selection and Shannon information

3. Evolution *in silico* and optimization of RNA structures

4. Random walks and ,ensemble learning‘

5. Sequence-structure maps, neutral networks, and intersections

Isolated system

$$U = \text{const.}, V = \text{const.},$$

$$dS \leq 0$$

Closed system

$$T = \text{const.}, p = \text{const.},$$

$$dG = dU - pdV - TdS < 0$$

Open system

$$dS = dS_{\text{env}} + dS \leq 0$$

$$dS = d_i S + d_e S$$

$$d_i S \leq 0$$

Entropy changes in different thermodynamic systems

 A Š Ø
 B Š A
 B Š Ø

Flow rate $r = h_R^{-1}$

Reactions in the continuously stirred tank reactor (CSTR)

Reversible first order reaction in the flow reactor

Autocatalytic second order reaction and uncatalyzed reaction in the flow reactor

Autocatalytic second order reaction and uncatalyzed reaction in the flow reactor

Autocatalytic second order reaction and uncatalyzed reaction in the flow reactor

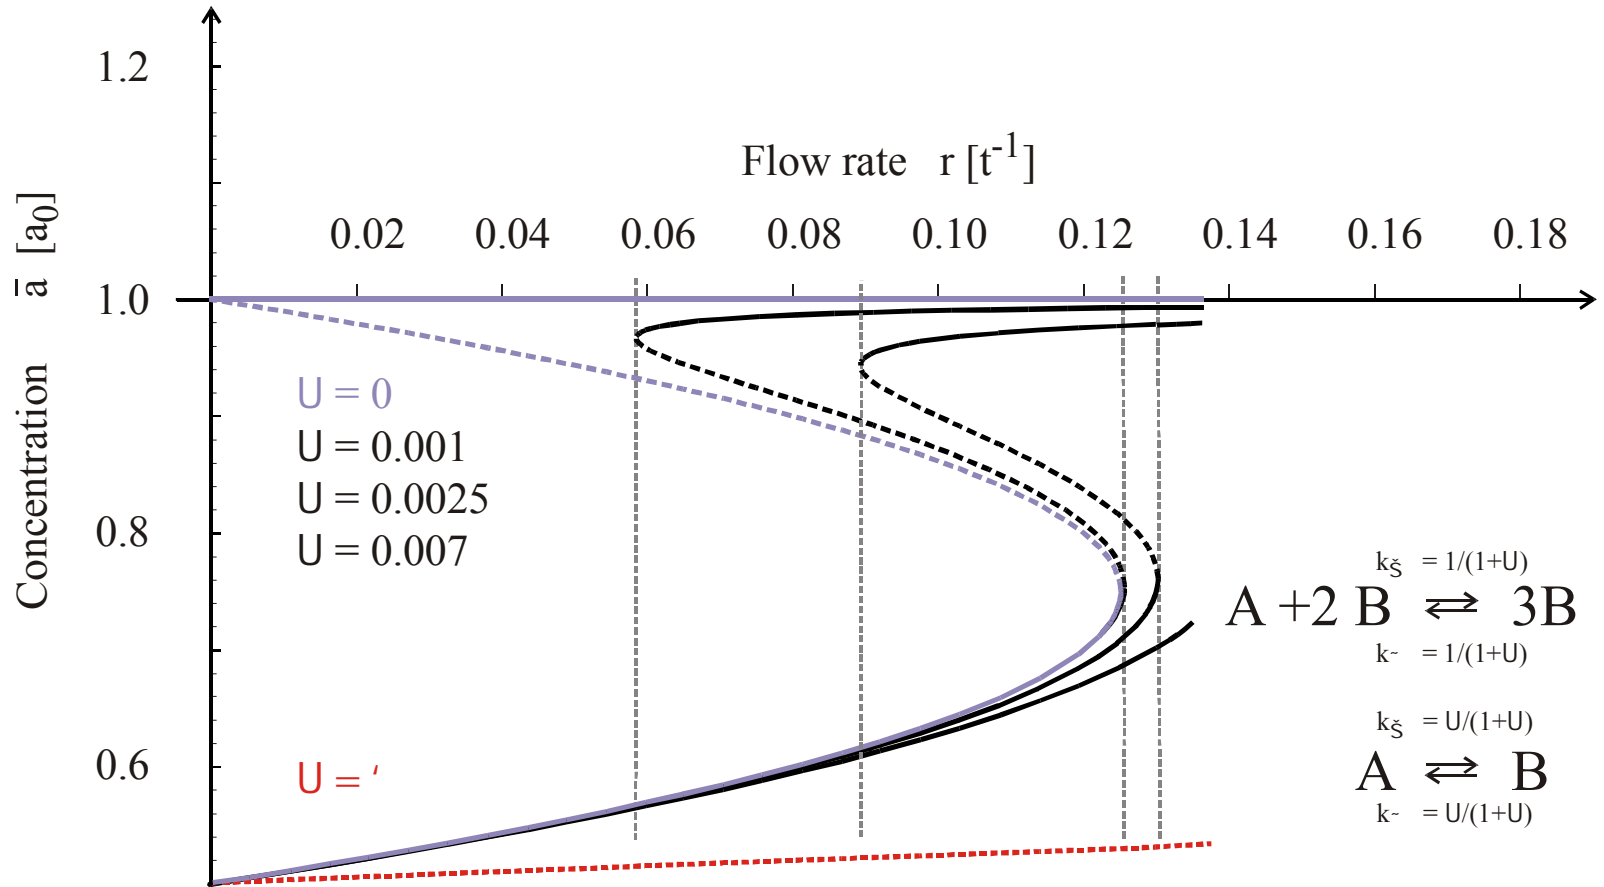

Autocatalytic third order reaction and uncatalyzed reaction in the flow reactor

Autocatalytic third order reaction and uncatalyzed reaction in the flow reactor

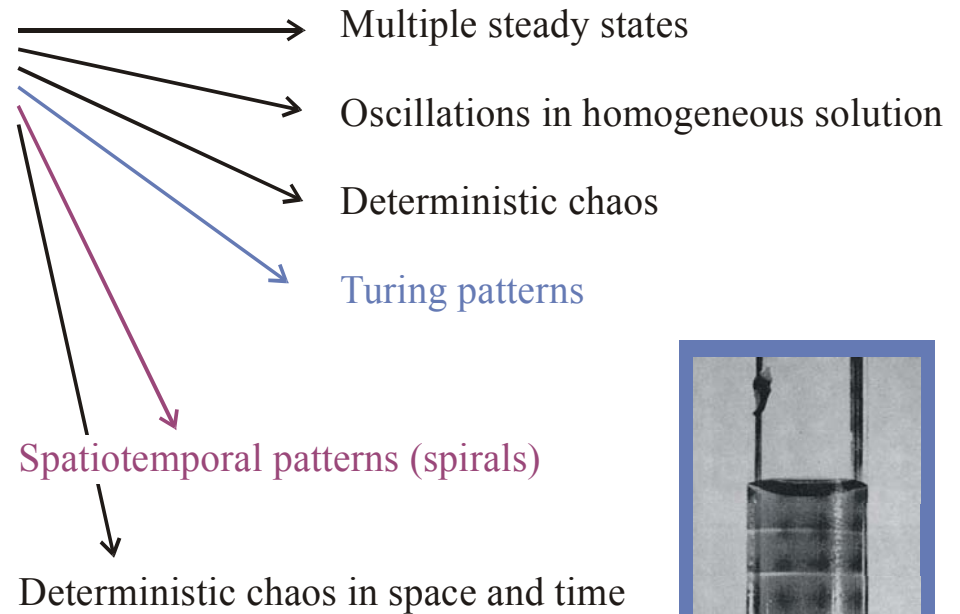

Autocatalytic third order reaction and uncatalyzed reaction in the flow reactor

Autocatalytic third order reaction and uncatalyzed reaction in the flow reactor

Autocatalytic third order reactions

Direct, $A + 2X \rightarrow 3X$, or hidden in the reaction mechanism (Belousov-Zhabotinskii reaction).

Pattern formation in autocatalytic third order reactions

G.Nicolis, I.Prigogine. *Self-Organization in Nonequilibrium Systems. From Dissipative Structures to Order through Fluctuations*. John Wiley, New York 1977

Autocatalytic second order reactions

Direct, $A + I \xrightarrow{k} 2I$, or hidden in the reaction mechanism

Autocatalytic second order reaction as basis for selection processes.

The autocatalytic step is formally equivalent to replication or reproduction.

Autocatalytic competition in the flow reactor

P.Schuster & K.Sigmund, Dynamics of evolutionary optimization, *Ber.Bunsenges.Phys.Chem.* **89**: 668-682 (1985)

$$k_1 > k_2 > k_3 > k_4 > k_5$$

Selection in the flow reactor: Reversible replication reactions

$$k_1 > k_2 > k_3 > k_4 > k_5$$

Selection in the flow reactor: Irreversible replication reactions

RNA as transmitter of genetic information

RNA as **working copy** of genetic information

RNA as adapter molecule

RNA is the catalytic subunit in supramolecular complexes

The ribosome is a ribozyme !

RNA as catalyst

ribozyme

RNA

RNA is modified by epigenetic control

RNA editing

Alternative splicing of messenger RNA

The RNA world as a precursor of the current DNA + protein biology

RNA as carrier of genetic information

RNA viruses and retroviruses

RNA as information carrier in evolution *in vitro* and evolutionary biotechnology

RNA as regulator of gene expression

gene silencing by small interfering RNAs

Functions of RNA molecules
