

# Bacteria-wide detection of 6S RNAs

Stefanie Wehner

University of Marburg

Bled, Slovenia  
14 February 2011

# Table of contents

1 Introduction

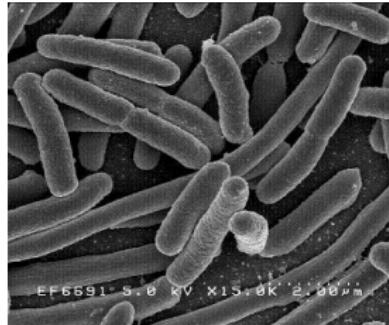

2 Project

3 Basic methods

4 Other strategies

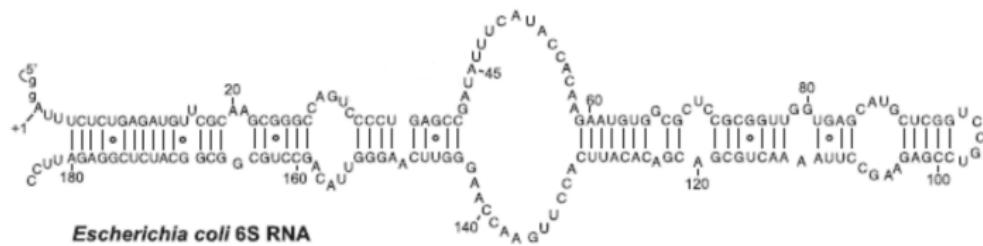

# 6S RNA

- Abundant small non-coding RNA in bacteria

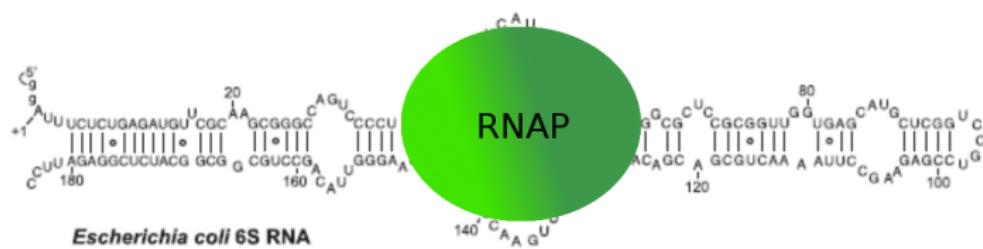

## 6S RNA

- Abundant small non-coding RNA in bacteria

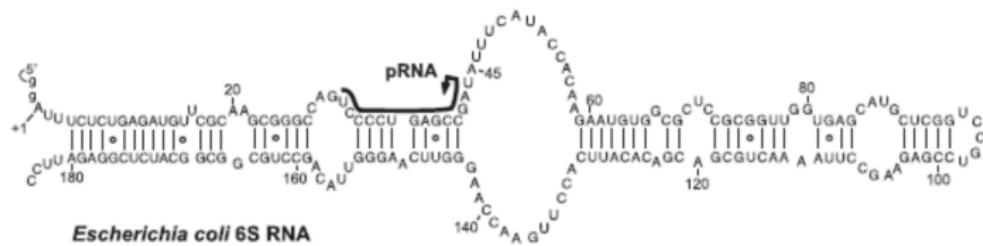

# 6S RNA

- Abundant small non-coding RNA in bacteria

# 6S RNA

- Abundant small non-coding RNA in bacteria

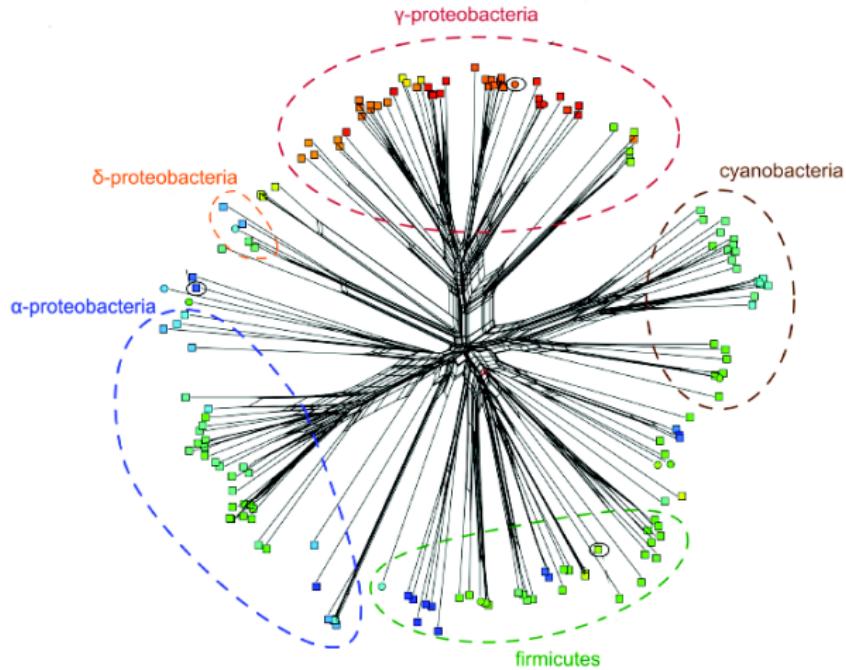

# Project

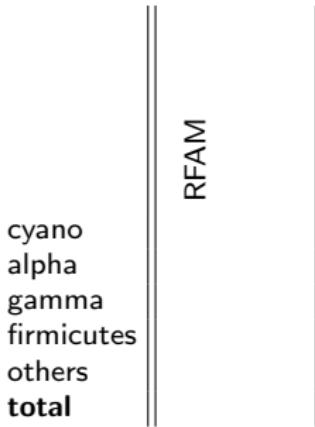

- Detect 6S RNAs in all bacteria

# Basic methods

## Other strategies: Synteny

- Analysis of 10000 nt up- & downstream of 6S RNAs of the RFAM alignment

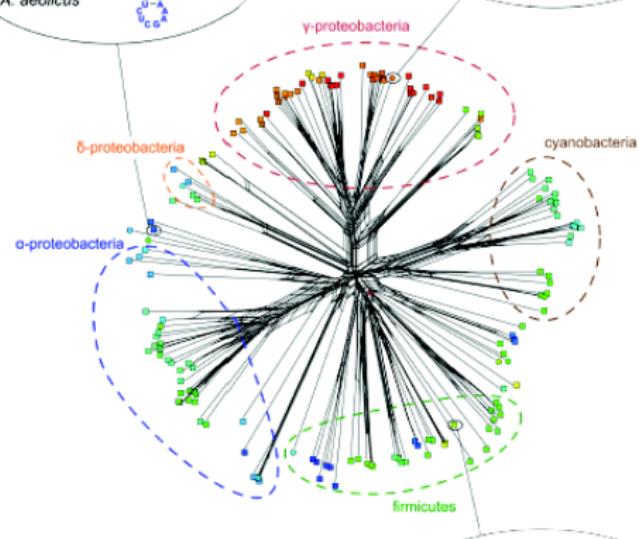

# Other strategies: Synteny

- Results:

- 40% 5-formyltetrahydrofolate cyclo-ligase → A
- 34% Z-ring-associated protein → B
- 28% Recombination factor protein RarA → C
- 22% DNA-binding transcriptional activator ArgP → D

	A	B	C	D
alpha	79	41	40	2
gamma	201	235	19	121
firmicutes	8	0	157	0
others	22	76	34	3
<b>total</b>	<b>311</b>	<b>352</b>	<b>257</b>	<b>126</b>

# Other strategies: Secondary structure rearrangements

END

Thank you for your attention!
