

Partition function
and equilibrium properties

Locally stable structures

Partition Function
and Equilibrium Probabilities
for Locally Stable Secondary
Structures

```
graph LR; A[Partition Function and Equilibrium Probabilities for Locally Stable Secondary Structures] --> B[Partition function and equilibrium properties]; A --> C[Locally stable structures];
```

The diagram consists of three rectangular boxes. On the right is a larger, gray-filled box containing the text 'Partition Function and Equilibrium Probabilities for Locally Stable Secondary Structures'. Two black arrows originate from the left side of this gray box. One arrow points horizontally to the left towards the top-left box, which contains the text 'Partition function and equilibrium properties'. The other arrow points diagonally down and to the left towards the bottom-left box, which contains the text 'Locally stable structures'. Both the top-left and bottom-left boxes are white with black borders.
